	3	4	5	
Children under 1 Year Old	\$3,255	\$3,925	\$4,595	\$670
1-18 Years Old	\$2,165	\$2,611	\$3,056	\$446
19-20 Years Old	\$1,352	\$1,528	\$1,704	\$177
- Please see an enrollment counselor for additional program information and requirement				

- The benefits you can get for your Children are : Well-child care, Physical exams, Vision care, Speech and hearing, Emergency ambulance transportation to a hospital, Immunizations, Diagnosis and treatment of illness and injury, X-ray and lab tests, Outpatient surgery, Emergency care

1. What can be inferred about “Medicaid”?

1. It's a charity organization.
2. It's a child care medical institute.
3. It's a medical center for the young.
4. It's an insurance service mainly for children.
5. It's an agency caring for families.

2. Which group of people can be enrolled into Medicaid ?

1. Any adults who are interested in the program
2. Approved children under nineteen years of age
3. Any persons with counselors approval.
4. Children from any wealthy families
5. Approved twenty-year-old children and under.

3. How much is the difference between the payment for each additional person for the size 5 family of a 1-18 years old and that of a 19-20 years old child for the size 4 family ?

1. \$ 269
2. \$ 261
3. \$ 429
4. \$ 168
5. \$ 502

4. The Mathews earn \$2,611 a month, how much do they pay for the insurance for their three children aged 9 , 12, and 17 ?

1. \$ 1,338
2. \$ 1,340
3. \$ 1,293
4. \$ 885
5. \$ 708

5. Who is **NOT** entitled to have Medicaid benefit ?

1. Mary who requires a new pair of corrective lens glasses.
2. Ken who requested reimbursement for has dental root canal.
3. Bob who needs to remove his brain tumor
4. Annie who has passed the entrance examination and needs a doctor's certificate.
5. Sarah who is going too dengue fever infected area in Africa.

Passage 1

Nowadays, lots of people look for the words “organically grown” when they want to eat healthy. But what if it turns out those little labels don’t actually mean what people think, and that the foods they feel so good about eating aren’t that different from the store brand – except for the price tag at checkout ?

That’s the question raised by researchers at Stanford University in a study published this week, which found that the health benefits of organically grown produce, meats, eggs and cheeses are negligible when compared to their non-organic counterparts. Not only were foods labeled organic no more nutritious than other foods, which tend to be substantially less expensive, they were just as likely as the store brand to be contaminated by bacteria like *E.coli* and other dangerous germs.

Moreover, the researchers found that the nutritional content of most fruits and vegetables depended more on ripeness, soil and climate than on how they were farmed. Organic produce generally had higher levels of phosphorus and compounds known as phenols, which may help prevent some cancers. But the differences were so tiny researchers couldn’t say for sure they conferred any overall health benefit. Meanwhile, some non-organic strains of fruits and vegetables actually had more vitamins and anti-oxidants than their pricier organic cousins.

Will any of this discourage people from pursuing healthier lifestyles by seeking out organically grown foods? Not likely. The organic produce market was a \$12.4 billion business last year, compared to 9.8 billion the year before and many people undoubtedly will see even minuscule differences in pesticide levels and bacteria resistance as worth the extra cost. Eating foods that don’t contain synthetic pesticides, hormones or additives is a lifestyle choice as much as a strategy for dietary health.

That’s because even for those skeptical of the health advantages of organic foods and farming methods, they have a generally positive impact on the environment. Organic farmers not only avoid the intensive use of pesticides to protect their plants, they also employ techniques like crop rotation and natural fertilizers that don’t produce harmful agricultural runoff to contaminate rivers and streams.

Organic farming has the potential to reduce the greenhouse gas emission that contribute to climate change. For many people, a healthier planet is as good a reason as any for eating, organic, regardless of the health advantages such foods confer.

1. What can be inferred from the question raised by researchers at Stanford University?

1. Organic foods are not worth eating.
2. Labels on organic foods are untruthful.
3. The price of organic foods is too high.
4. Organic foods are quite different from non-organic counterparts.
5. Lots of people are misled by the words “organically grown”

2. What does the writer expect the reader to feel after reading paragraph 1?

1. Disappointed
2. Horrified.
3. Helpless.
4. Amazed.
5. Angry.

3. Which is **NOT** the true statement about organic and non-organic foods ?

1. Non-organic foods are as nutritious as organic ones.
2. Non-organic foods are generally cheaper than organic ones.
3. Health benefits of organic and non-organic foods are very slightly different.
4. Both organic and non-organic foods can be contaminated by bacteria and other dangerous germs.
5. Organically grown produce, meats, eggs and cheese are more delicious than their non-organic counterparts.

4. How are the ideas of the passage mainly developed?

1. Through general analysis.
2. Through specific details.
3. Through chronological order.
4. Through comparison and contrast.
5. Through cause and effect.

5. How did the writer largely support his points?

1. By logical reasoning.
2. By referring to organic farmers.
3. By specific facts based on research.
4. By quoting nutritionists.
5. By direct observation.

6. How do organic fruits and vegetables differ from non-organic ones ?
1. They could gradually resist cancers.
 2. They had more pesticide residue.
 3. They had more nutritional content.
 4. They had more vitamin and anti-oxidants.
 5. They had higher levels of phosphorus and phenols.
7. What conclusion can be drawn from the passage ?
1. Pursuing healthier lifestyle is unreasonable.
 2. Many people are unwilling to pay the extra cost for organic foods for the sake of a healthier environment.
 3. The research findings undoubtedly encourage people to eat organic foods.
 4. In spite of the research findings, the growth of organic food business is evident.
 5. The use of the crop rotation technique and natural fertilizers in organic farms reduces the greenhouse gas emission.
8. What is the chief purpose of this passage?
1. To inform.
 2. To inspire.
 3. To disapprove.
 4. To confirm.
 5. To judge.
9. What is the tone at the end of the passage ?
1. Expectant.
 2. Satisfied.
 3. Objective.
 4. Sarcastic.
 5. Disappointed.
10. Which is the best title for the passage ?
1. Healthy Foods.
 2. Food Choices.
 3. Pricier Foods for Healthier Planet.
 4. Is Organic Food Worth It ?
 5. Impact of Organic Food on Environment.
